

INNOVATIVE FLOORS

VERSATILE AND DURABLE SURFACE SOLUTIONS.

Our floors are designed to withstand stain and scratches while also being fire retardant, easy to clean and 100% waterproof. Additionally they are environment friendly as they can be easily recycled.

Experience unmatched comfort and quietness as our SPC Flooring is designed to reduce noise, reating a peaceful ambiance in your home. Along with that, It has many qualities like being water proof, low maintenance, kid-friendly, family friendly, and quick to install.

So, Don't compromise on quality – choose our SPC Flooring for the best quality at the best price at Our.

VARIETIES

of colors

Rigid core flooring from Our, blends the beauty of wood with the sturdiness of stone. We provide an array of SPC Flooring alternatives to make your space distinctive. Despite being adaptable and durable, our flooring follows a methodology that takes into account specific placement and space constraints. Inspired by the true nature of Earthy hues and textures, each of these is inventively manufactured and has a unique characteristic which makes it perfect for a variety of applications.

PRODUCT

Structure

01 UV Coating

It is the topmost layer of our SPC floors. A UV-cured coating is applied to the surface of the flooring and hardened using UV light. This layer provides added protection against fading, or discoloration caused by exposure to sunlight. This layer also renders a stain-free quality and is responsible for the matt finish.

02 Wear Layer

on SPC floors is a clear, protective layer that is applied on top of the design layer. it is made of a durable material that helps to resist scratches and wear from foot traffic. This layer is important because it helps to prolong the life of the flooring and keep it looking new for longer

03 PVC Decorative Layer

The decor film layer on SPC (Stone Polymer Composite) floors is a thin, printed layer that is applied on top of the core layer. The decor film layer is important because it gives the flooring its aesthetic appeal, allowing it to mimic the look of natural wood or other materials while providing the durability and resistance of spc.

04 SPC Board

The core layer of the floors is the main structural layer made from a mixture of polymer Resin and Natural stone compotion ,which gives it strength and stability and also contributes to its waterproof property. The SPC core layer is also dense and stable, it makes the SPC flooring much more durable and resistant to wear and tear compared to traditional vinyl flooring.

05 UNICLIC® Locking Technology

This Unique Feature Makes the SPC floors so easy to install and DIY-friendly. At KEO Surface our floors have a patented locking mechanism (Unilin) which allows a floating installation and keeps the floors attached more effectively. This layer also ensures that no adhesives or materials are required for installation.

06 Underlayment

This layer contributes to additional cushioning stability and sound insulation for the flooring. It is typically made of high-density IXPE or EVA attached beneath the Core.

INSTALATION

Installation is fast and easy thanks to the unique click lock system. Click Lock Technology works perfectly for both the long and short sides of the flooring panel and ensures there are no unwanted gaps or spaces between floorboards.

Start at a corner, tongue side facing wall, with spacers for an 8-12 mm expansion gap.

Assemble the second row on the subfloor, tilt and push to attach to the first row, then click into place.

Insert the second plank's end tongue into the first plank's end groove at an angle, then click into place.

Begin the next row with the last cut-off piece from the previous row

For the last plank of a row, measure, mark, score, and snap off the required length, then insert.

For heating vents, cut the plank to length, measure and mark areas to cut out, then cut allowing for expansion.

Begin the next row with the last cut-off piece from the previous row.

Trim door frames by placing a plank upside down next to the frame and cutting to the necessary height.
